

ABSTRACT

A data printing system, including: a digital camera or other image capturing device, including a memory for storing individual unit identification information of the image capturing device; a print service administration device, connected to a network, for administering image data printing and for receiving image data recorded by the image capturing device; and a printer or other print processing device, connected to the network, for executing a printing process in accordance with an instruction from the print service administration device. In the data printing system, the individual unit identification information and the image data are transmitted from the image capturing device to the print service administration device; and the printing process by the print processing device is administered by establishing a logical linkage between the individual unit identification information and the image data.
